

PRODUCT DESCRIPTION – EnBac® SK3

Description

EnBac® SK3 is a powder containing a specially-formulated range of micro-organisms, which biologically treat wastewater which accumulates in Septic Tanks.

EnBac® SK3 contains:

- High performance aerobic and facultative anaerobic micro-organisms
- Specific micro-nutrients for domestic wastewater (including trace metals, vitamins, amino acids and metabolic stimulants)
- Macro- nutrients – essential to the balanced growth of the micro-organisms
- Bio-enhancer

How EnBac® SK3 works

The micro-organisms in EnBac® SK3 will form a biomass, or biofilm which lives on the walls of your septic tank. The micro-organisms will then produce enzymes which go to work on the Fats, Oils and Greases (FOG) in the wastewater. They break down the fats, so that the fats don't get the chance to conglomerate, and the end products are CO₂ and H₂O.

SK3 is simple to use. Just drop one water-soluble sachet into the loo basin, once a month, and flush the loo. It's best to do this last thing at night.

SK3 is a perfectly natural product. It contains no corrosive chemicals and is non-hazardous. It won't damage metal, ceramic or plastic.

The Effects of Using EnBac® SK3

SK3 will reduce malodours from your tank.

SK3 reduces the build-up of grease deposits, this reduces the likelihood of blockages.

Regular use of SK3 will mean less grease gets into your soakaway, which means it should last longer.

SK3 accelerates the start-up of new septic tanks.

Low temperatures may upset septic tanks. SK3 helps to improve cold weather operation.

SK3 reduces sludge production.

How Safe is EnBac® SK3?

When used as directed, EnBac® SK3 is safe, harmless to people, clothing and the environment. EnBac® SK3 is completely biodegradable.

Packaging

12 x 25g sachets

400 x 25g sachets

Storage

DO NOT FREEZE. Store in a cool, dry location. Do not inhale dusts. Avoid excessive skin contact. MSDS available on request.
